

PORTE ALL'AVANGUARDIA AVANT-GARDE DOORS

a cura di Annamaria Maffina

Attraverso il suo laboratorio di Ricerca & Sviluppo, GD Dorigo dal 1975 produce porte per interni con grande cura dei dettagli e tecnologie innovative, oltre ad intercettare trend contemporanei per dare forma a nuove sperimentazioni funzionali. Il cuore pulsante dell'impresa è sostenuto da valori tipici dell'imprenditoria italiana che hanno favorito la sua crescita, raffigurando un'azienda al passo con i tempi e un'organizzazione fondata sulla razionalità del sistema produttivo e da stimoli verso l'innovazione.

Particolare attenzione viene posta verso l'aspetto green fin dalla scelta delle materie prime e delle soluzioni energetiche alternative, finalizzate a contenere l'impatto e l'inquinamento industriale. Molta l'attenzione alle fonti da cui proviene il legno e alla partecipazione alle politiche di rigenerazione ambientale. È quindi una delle principali realtà industriali italiane che ha saputo evolvere l'eccellente maestria artigiana in processi d'industrializzazione avanzati, nell'ambito della produzione di porte d'arredo per interni e di porte tecnologiche per il comparto dell'edilizia

From 1975, through its laboratory of Search & Development, GD Dorigo produces doors for inside with great care of the details and of the innovative technologies intercepting contemporary trend in order to give form to new functional experimentations. The pulsating heart of the company is sustained by typical values of the Italian business that have facilitated its growth representing a company in step with the times and an organization founded on the rationality of the productive system and on the incentives for the innovation. Particular attention is given to the green aspect thanks to the choice of the raw materials and of the alternative energy solutions that are aimed to contain the impact and the industrial pollution. A great attention is also dedicated to the sources from which the wood originates and to the participation to the environmental regeneration politics. It is therefore one of the principal Italian industrial realities that has known how to evolve the excellent craftsmanship in advanced processes.

of industrialization in the field of the production of furniture doors for inside and of technological doors for the division of the professional construction industry as hospitals, hotels, schools and offices. The whole GD Dorigo business system is certified UNI EN ISO 9001: 2008. XITE is the new door designed by the architect Roberto Santi and by the Eban4.0 team for GD Dorigo. A frameless door lined on both sides with a metal sheet acid-etched in aluminum or in brass and able to disappear when inserted in a paneling of the same material. In 2006 the architect starts to experiment new manufacturing techniques of the aluminum, related to the world of the art and of the engraving. In 2015 he meets Raffaele and Roberto Bernardi with which he decides to carry out his ambitious project and to create the Eban4.0 team. In 2016, during a meeting with GD Dorigo, takes origin the idea to create a new door using the same principle. This generates XITE a wood door lined in metal. www.gd-dorigo.com/it
